

CRISIS ACCOMMODATION

INC-LH123-2026-01-09

Requirement 78 rooms of which 3 accessible, for 121 guests, everyone in a room by 23:30. Requested from 6 hotels, 4 replied.

Station may commit

The cheapest usable offer is 9672 EUR against a station commitment limit of 25000 EUR.
Airport Inn, 160 rooms of which 6 accessible, 110 EUR per room, check in from 21:00, 8 km. Offer deadline 18:00.

Usable offers, cheapest first

Hotel	Rooms	Accessible	Rate	Rooms cost	Breakfast	Coaches	Total
1. Airport Inn cheapest	160	6	110 EUR	8.580 EUR	0 EUR	1.092 EUR	9.672 EUR

Offers that were not ranked

- Lakeside Hotel.** Offers 2 accessible rooms, 3 are required. No coach parking on site. 3 coaches have to unload.

Replies that did not say enough

- Hotel Sonne.** Call back and ask for: rooms available, rate per room in EUR, accessible rooms, whether breakfast is included, earliest check in time.

Extractions that did not match the reply

- Grand Central.** The extraction produced values that do not appear in the reply: rooms available (120), rate per room (145), accessible rooms (6), breakfast charge (12.5), check in time (15:00), offer deadline (18:00). Read this reply by hand.

No reply before the deadline from: Transit Lodge, City Park Hotel. Chase by phone.

How this number was reached

- Ranking is arithmetic in code, not a model judgement. The same offers always produce the same winner.
- Coach cost is an assumption: 300 EUR per coach plus 8 EUR per km, 3 coaches for 121 guests.
- An incomplete reply is never ranked. Missing fields become a specific question, not a guess.
- Every number the model extracts is checked against the reply text it came from. A value that does not appear in the source is treated as ungrounded and the offer is pulled out of the ranking for a human to read.

- Splitting the requirement across two hotels purely to keep each piece under the commitment limit is limit avoidance. This workflow will not do it.

What this workflow is not allowed to do

- This workflow requests offers, reads them and ranks them. It does not book, does not confirm, and does not give any hotel a payment guarantee.
- No passenger data crosses into this workflow. It receives room counts and times only.
- Nothing is sent to a real address. The dispatch step is simulated and labelled as such.

Simulated hotel replies. No message was sent to any real address. Unit assumptions for coach transport are unverified.
